<b>VDAS lifecycle across procurement systems</b>	<b>3</b>
Design and construct	4
Construct only	5
Public private partnership	6
Alliance	7

# VDAS lifecycle across procurement systems

The following flowcharts align the flow of information between the Appointing and Appointed parties, in line with the VDAS lifecycle and the ISO 19650 process as set out in Part B.

The process in brief is as follows:

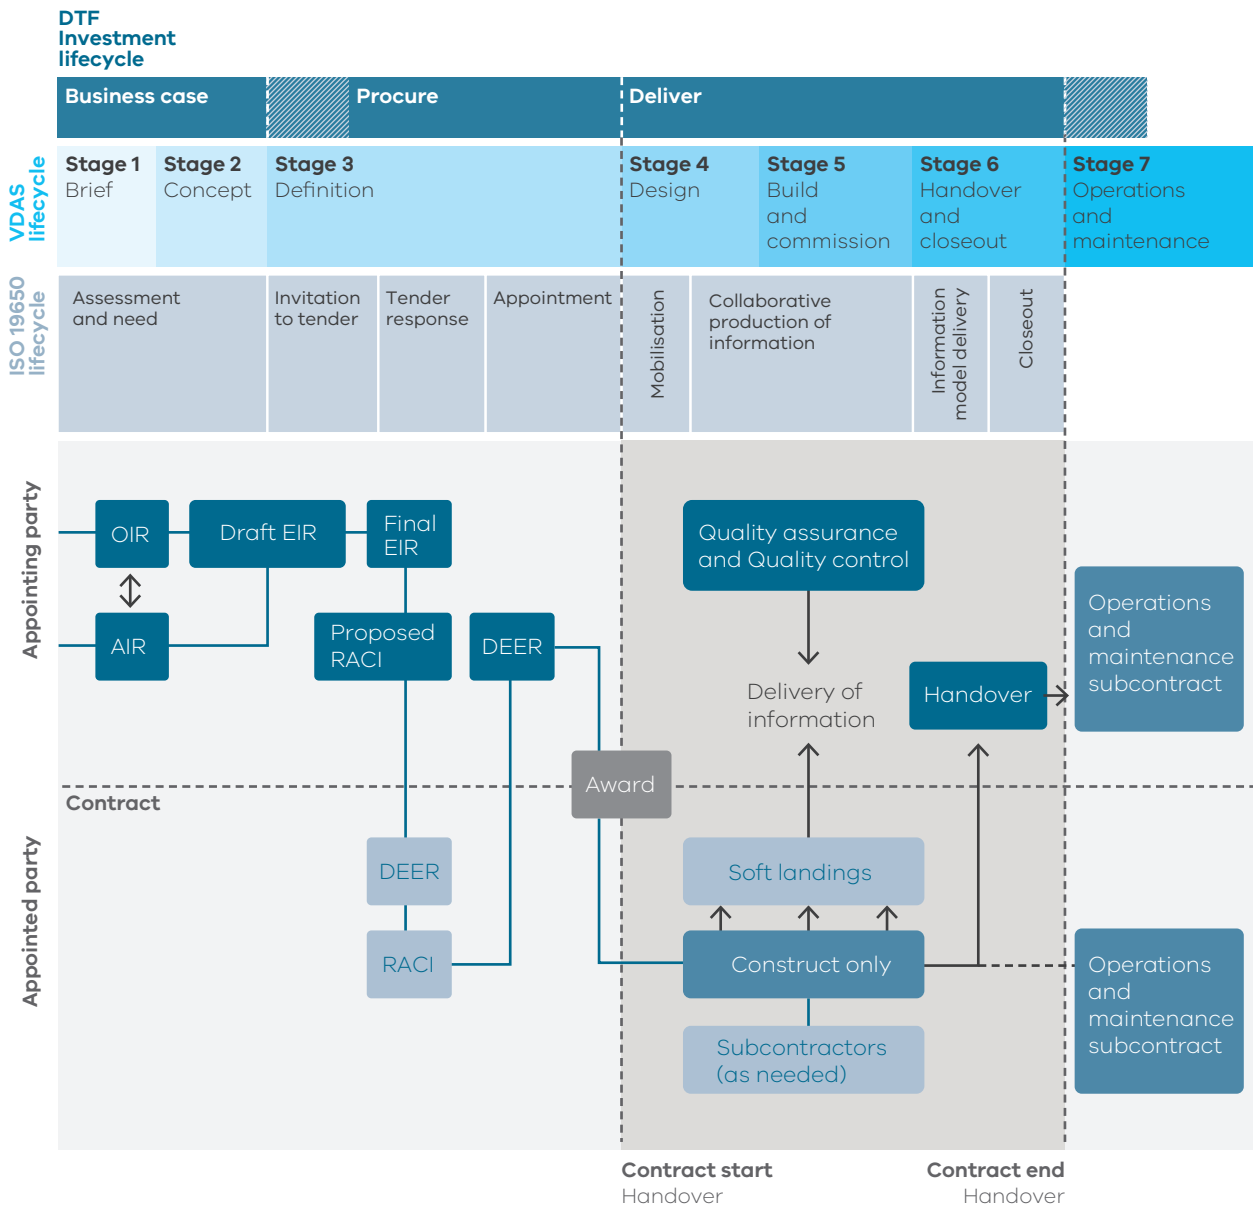

- The Appointing Party defines their OIR and draft an EIR.
- This is finalised and combined with the RACI scope checklist in the invitation to tender.
- The tender participants respond by completing a DEEP and RACI scope checklist.
- The Appointing Party responds with a DEER before awarding the contract.

Smooth information flow across the contract phase will ensure a soft landing.

This process however has subtle differences depending on the procurement route.

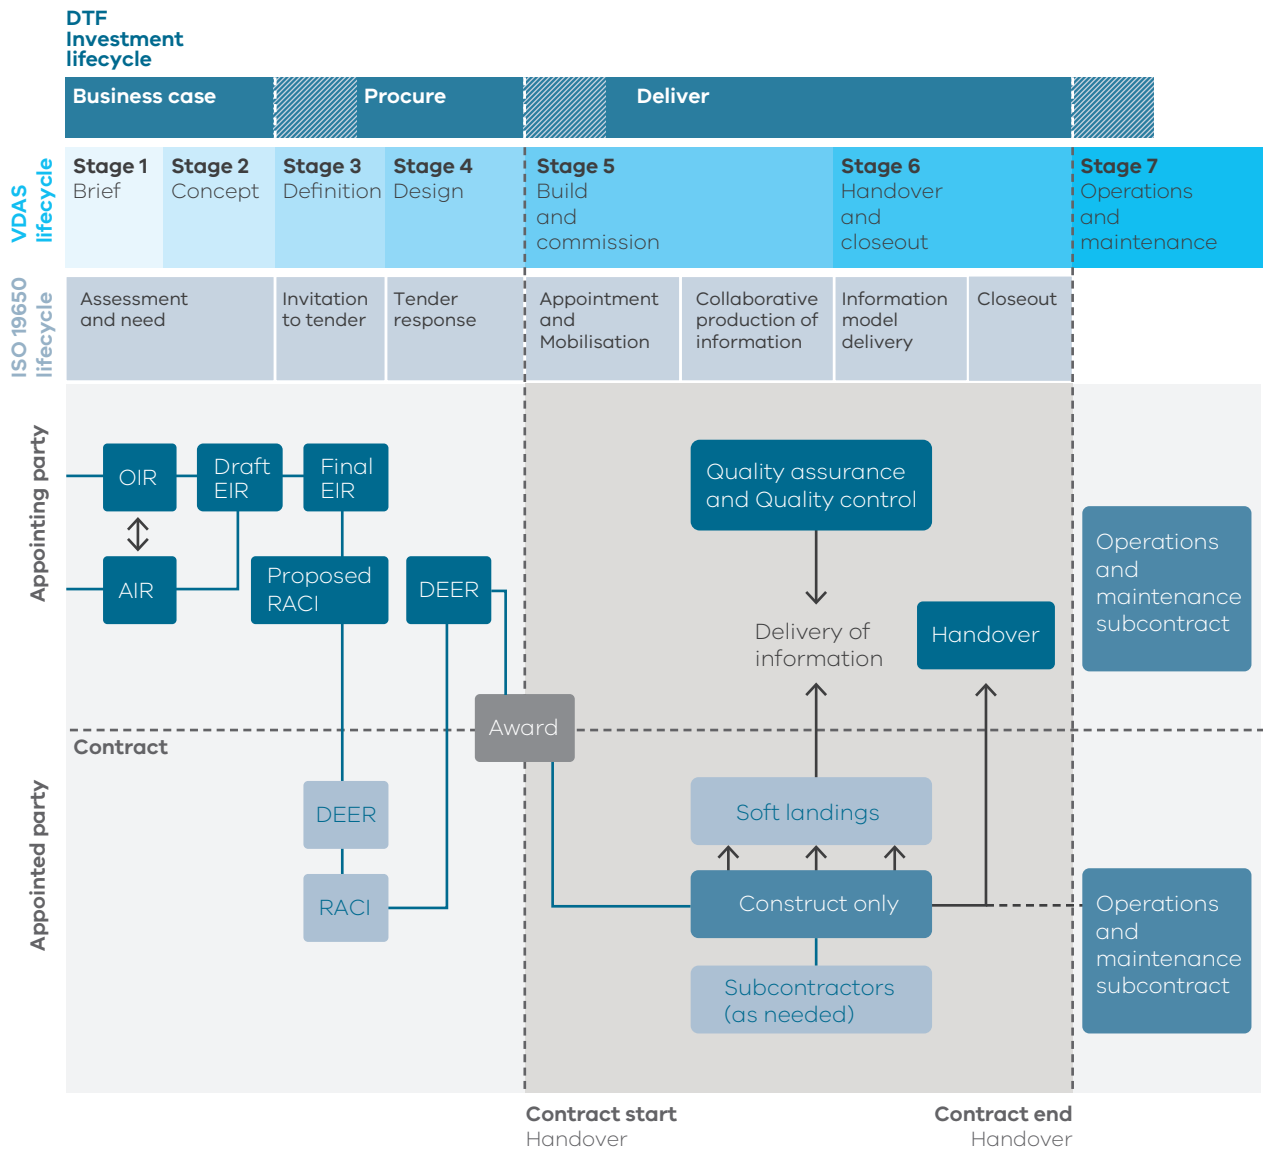

# Design and construct

The Appointing Party defines information requirements before appointing one legal entity to complete both the design and construction. This information created is handed over in a separate contract through operations and maintenance.

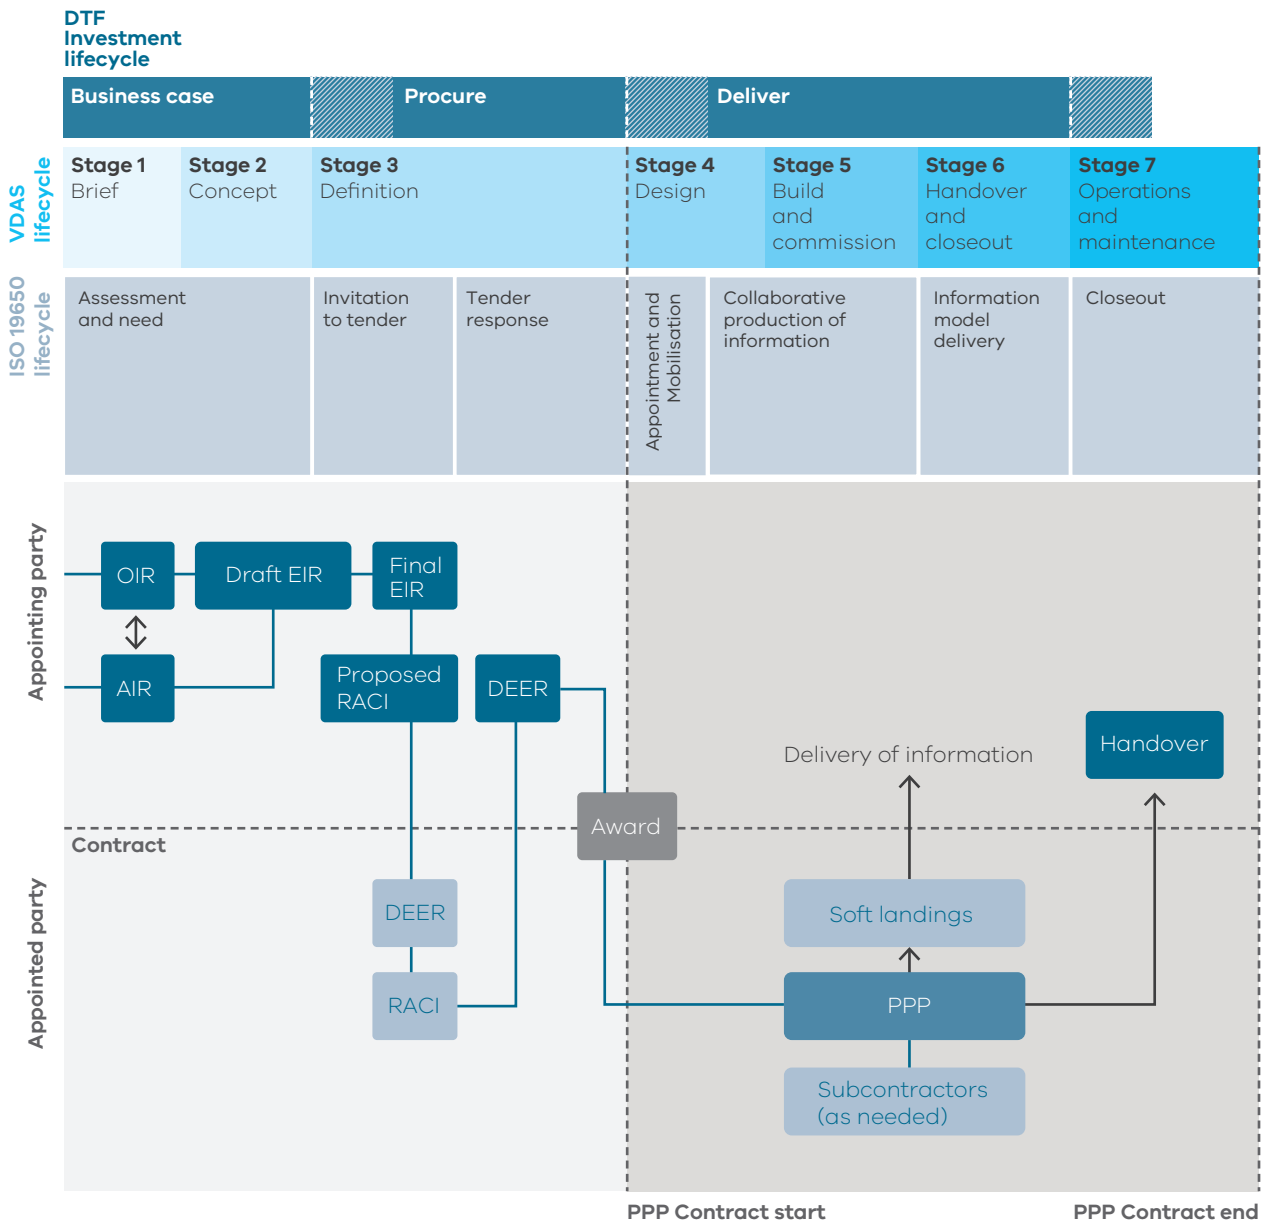

# Construct only

The Appointing Party works with an independent design team to define the information requirements before awarding the contract to a construction contractor. The information created is handed over in a separate contract through operations and maintenance.

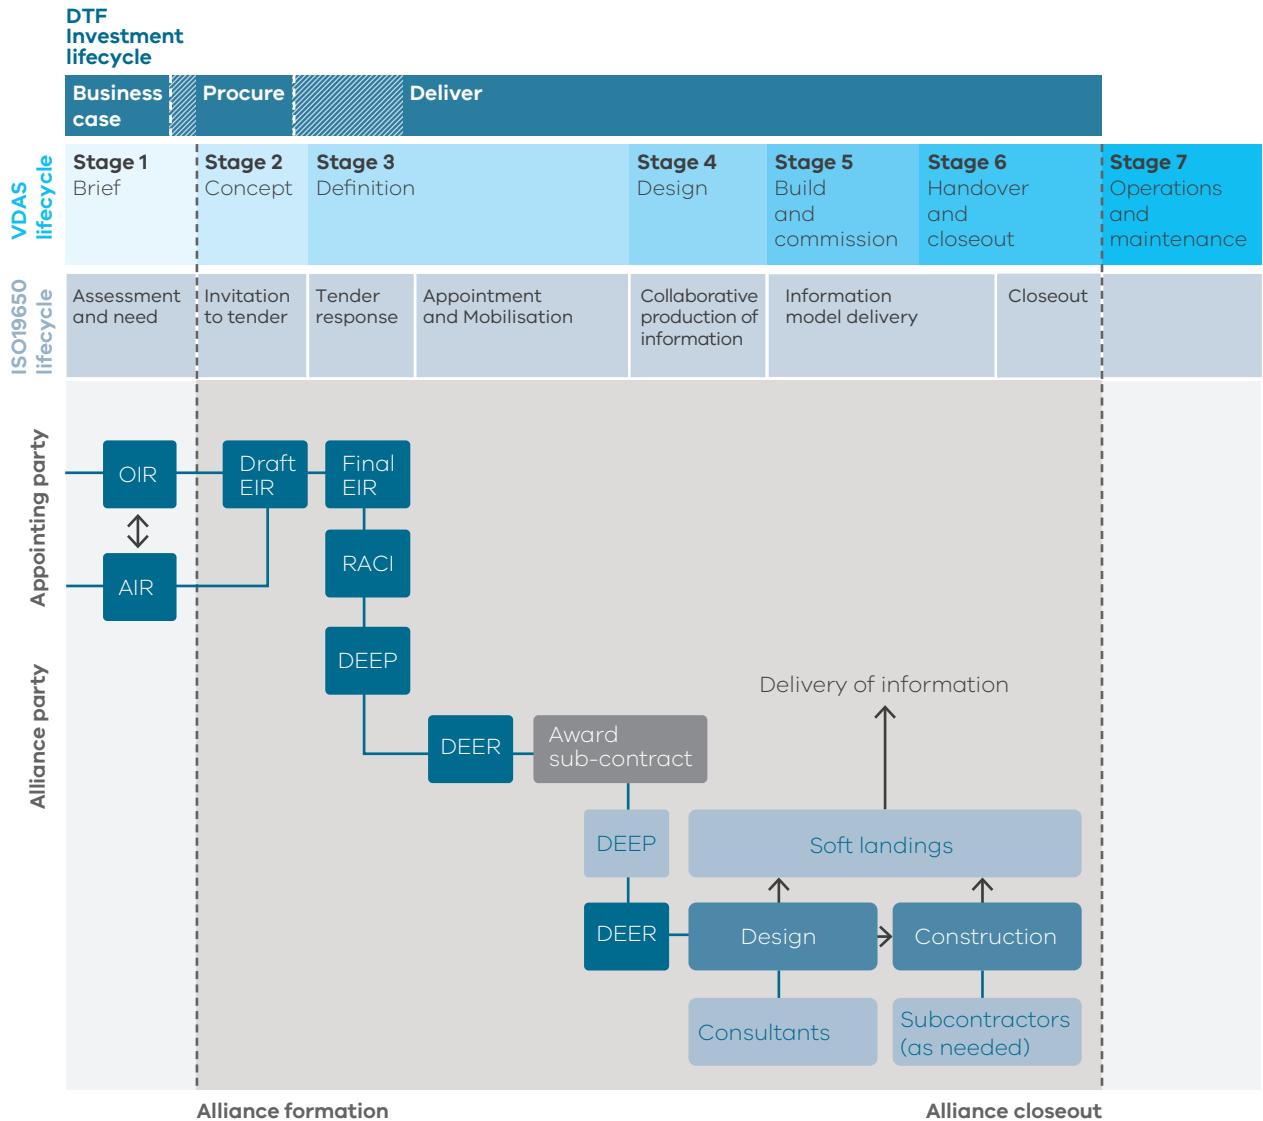

# Public private partnership

The design, building, commissioning and operations and maintenance phases are combined into one wholly responsible legal entity. The consortium delivers information between the stages, fully aware that it is responsible for using this generated information to maintain the future asset.

# Alliance

An alliance is formed early in the briefing stage to begin developing on high level OIR and AIR. With no separation between Appointing and Appointed Parties, the alliance works toward moving information from concept through definition and design to building and handover. The information created is handed over in a separate contract through operations and maintenance.
